## Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

## Consider Fixing:

### Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Enable compression](#) for the following resources to reduce their transfer size by 93KiB (65% reduction).

- Compressing <http://up.sibgraph.ir/up/admin-sibgraph/sibgraph/theme2/js/jquery-1.9.1.min.js> could save 58.5KiB (64% reduction).
- Compressing <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/engine1/wowslider.js> could save 16.7KiB (64% reduction).
- Compressing <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/engine1/style.css> could save 6.6KiB (71% reduction).
- Compressing <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/engine1/script.js> could save 6.6KiB (66% reduction).
- Compressing <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/style.css> could save 4.6KiB (72% reduction).

### Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

[Minify CSS](#) for the following resources to reduce their size by 2.8KiB (18% reduction).

- Minifying <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/engine1/style.css> could save 1.6KiB (17% reduction).
- Minifying <http://up.sibgraph.ir/up/admin-sibgraph/theme/mrsin/style.css> could save 1.2KiB (20% reduction).

## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 2 blocking script resources and 1 blocking CSS resources. This causes a delay in rendering your page.

Approximately 1% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.
